For Porcelain. Shofu's advanced abrasives technology produced this product to meet the challenge of the fragile handling characteristics of porcelain veneers, inlays and onlays in the laboratory. Specifically designed for contouring and polishing. **SoftCut Polishers** work well using light pressure which minimizes heat build up. To smooth rough surfaces (after gross reduction with **Shofu Diamonds or Dura-Green Stones** or **Chipless Wheels**) use the PA grit (**green band**). For the removal of light scratches (the result of using Shofu micron diamonds or **Dura-White Stones**) use the PB grit (**blue band**). For highly polished surfaces use either PA or PB grit with an exceptionally light touch. Recommended for finishing and polishing porcelain surfaces prior to glazing to permit lower temperature firing. (A glaze-like lustre can also be achieved with **Ultra II Porcelain Polishing Paste**) - All SoftCut Polishers are packaged one dozen of a kind to a box.

SHOFU CERAMOSONIC CONDENSER

Through its ultrasonic function, it imparts low amplitude, high frequency vibrations enabling successful condensation of moist porcelain particles

- It operates at 220 volts a.c. over 28000 cycles per second
- Ultrasonic vibrations improve the substructure of the porcelain and will dispense trapped air and increase the density
- Less shrinkage during firing
- Enhanced surface and strength of porcelain
