**Remarks:**
Above data is based on test results using an A2 shade composite. The light tip was placed above and pointed perpendicular to the composite. Tests were done as per ISO 4049 Standard. The samples were measured and the data was divided by two (50% of the total composite depth cured). ISO 4049 Standard requires that the results for class II restorative materials should be at least 1.5 mm for non-opaque shades and 1.0 mm for opaque shades. All resins and composites have different curing times. It is recommended that you should test your resins and composites performance to determine the curing times required.
LED Scalers

**REFINE MaxPiezo 7+ / DS7+ PORTABLE LED SCALERS**
- Automatic frequency tracking, real-time feedback
- Extra large, capacity 600 ml water tank for water, chlorhexidine, hydrogen peroxide, sodium hypochlorite etc.
- Power and water controlled by touch panel, easy to clean for infection control
- Detachable handpiece
- Frequency: 28 kHz ± 3 kHz
- Complete with 8 tips
- Size: W180mm x D180mm x H150mm
- Weight: 1.6 kg (unit only)
- Colour: White

**ONE YEAR WARRANTY (except scaler tips)**

MaxPiezo 7+ (EMS Type) Portable LED Scaler Set ................ $880.00
MaxPiezo DS7+ (SATELEC Type) Portable LED Scaler Set ...... $880.00

---

**REFINE MaxPiezo 6+ / DS6+ LED SCALERS**
- Automatic frequency tracking, real-time feedback
- Power and water controlled by touch panel, easy to clean for infection control
- Detachable handpiece
- Frequency: 28 kHz ± 3 kHz
- Complete with 6 tips
- Size: W155mm x D168mm x H80mm
- Weight: 0.6 kg (unit only)
- Colour: White

**ONE YEAR WARRANTY (except scaler tips)**

MaxPiezo 6+ (EMS Type) LED Scaler Set ..................... $396.00
MaxPiezo DS6+ (SATELEC Type) LED Scaler Set .... $396.00

---

**REFINE N3000L / V3000L BUILT-IN LED SCALERS**
- Automatic frequency tracking, real-time feedback
- Detachable handpiece
- Frequency: 28 KHz ± 3 KHz
- Complete with 6 tips

**ONE YEAR WARRANTY (except scaler tips)**

N3000L (EMS Type) Built-In LED Scaler Set .............. $275.00
V3000L (SATELEC Type) Built-In LED Scaler Set .... $275.00

Curing Light Mode Applications

TACK: A very short initial cure for temporary processing before the final cure. For example when removing excess materials whilst bonding veneers or using temporary cement. Tack rings are included inside the box.

TURBO: Super fast curing for resin and composite that is no more than 2 mm thick. Also recommended for ceramic brackets, bonding veneers etc.

3' + 3': 3 Second Mesial + 3 Second Distal for metal brackets resin bonding (with 1 second blink in-between)

6' + 6': 6 Second Mesial + 6 Second Distal for metal brackets with bonding resin requiring more curing time and for buccal tube bonding (with 1 second blink in-between)

FULL: For general applications

RAMP: First 0–5 seconds are ramped for general application.

SOFT CURE: First 0–5 seconds are ramped for more gentle processing, designed for patients sensitive to heat.

C01 Complete Set with Built-In Light Intensity Indicator

**REMARKS:** Above data is based on test results using an A2 shade composite. The light guide tip was placed above and pointed perpendicular to the composite. Tests were done as per ISO 4049 Standard. The samples were measured and the data was divided by two (50% of the total composite depth cured). ISO 4049 Standard requires that the results for class II restorative materials should be at least 1.5 mm for non-opaque shades and 1.0 mm for opaque shades.

All resins and composites have different curing times. It is strongly recommended that you should test your composite and resin performance to determine the curing times required.

**Data is only for reference, always follow the instructions from your resin and composite manufacturers.**

- There are many variables (distance and angle between the light tip and composite, area, shade, thickness and type etc.) affecting composite curing times. It is recommended to place and cure a maximum of 2 mm for each composite placement.
- Using a barrier sleeve on the curing light will reduce 5-10% of light intensity.
- The light guide tip should be placed approximately 1-2 mm above the composite or resin and pointed perpendicular to the tooth surface.
- High intensity curing lights produce more heat. This is a direct indication of the power of the light being emitted. When using the device for more than 10 seconds, do not keep the light tip in one position. It is always recommended to use a dental syringe to blow a cold air flow on the area during long periods of curing. This will maintain a lower temperature for the composite and surrounding area, particularly when using rubber dam so as to avoid any rubber dam breakage due to heat build-up.
- Do not expose soft tissue to the light being emitted for more than 2 seconds or burns may occur.
- Avoid the light guide tip coming into contact with any soft tissue in the mouth.

**REMARKS:** Above data is based on test results using an A2 shade composite. The light tip was placed above and pointed perpendicular to the composite. Tests were done as per ISO 4049 Standard. The samples were measured and the data was divided by two (50% of the total composite depth cured). ISO 4049 Standard requires that the results for class II restorative materials should be at least 1.5 mm for non-opaque shades and 1.0 mm for opaque shades. All resins and composites have different curing times. It is strongly recommended that you should test your composite and resin performance to determine the curing times required.

- There are many variables (distance and angle between the light tip and composite, area, shade, thickness and type etc.) affecting composite curing times. It is recommended to place and cure a maximum of 2 mm for each composite placement.
- Using a barrier sleeve on the curing light will reduce 5-10% of light intensity.
- The light tip should be placed approximately 1-2 mm above the composite or resin and pointed perpendicular to the tooth surface.
- High intensity curing lights produce more heat. This is a direct indication of the power of the light being emitted. When using the device for more than 10 seconds, do not keep the light tip in one position. It is always recommended to use a dental syringe to blow a cold air flow on the area during long periods of curing. This will maintain a lower temperature for the composite and surrounding area, particularly when using rubber dam so as to avoid any rubber dam breakage due to heat built-up.
- Do not expose soft tissue to the light being emitted for more than 2 seconds or burns may occur.
- Avoid the light tip coming into contact with any soft tissue in the mouth. As an option, you may cover the entire curing light with a disposable sleeve and then place the Heat Protective Ring (included inside the packing box) onto the light tip covered with sleeve as shown below. Ensure the Heat Protective Ring is securely positioned on the curing light before starting the cure.

A08 DENTAL APEX LOCATOR
- Bright LCD screen with the trajectory of the file being clearly indicated by different colours
- Foldable design with adjustable view angle, saves space and protects the screen
- The unit is designed with a smooth seamless body and membrane buttons to enhance cold sterilization and help avoid cross contamination
- Advanced multiple frequency technology with automatic calibrating ensures accurate measurement
- Measurement results are not affected by tooth type, size of root canal or the internal environment of root canal
- Different beep tones indicate the position of the file in the root canal
- Rechargeable lithium battery
- Accessories autoclavable up to 134°C
- Screen size: 110 mm x 70 mm
- Overall size: L122 mm x W118 mm x H25 mm
- Weight: 300 gms (including battery)

PREMIUM AP III DENTAL BURNER
- Designed for safe, one handed use
- Battery powered ignition lights instantly with just a press of a button
- Adjustable flame setting and lock-off switch
- Burns up to 30 minutes on one butane fill-up
- Size: 14 cm long

WOODPECKER CURING LIGHT ACCESSORIES
- Test for class B autoclaves to evaluate the capacity of penetration of the steam in hollow loads.
- Composed of a tube and 250 colour testers to confirm sterilization
