Orthodontic diamond finishing strips
For interproximal enamel reduction (IPR), also referred to as “stripping” or “recontouring”. IPR is a technique in which part of the enamel layer is removed to create sufficient space for orthodontic alignment. The diamond finishing strips enable simple and precise reduction of the interproximal tooth substance. The flexible strips follow the natural contours of the teeth to provide optimal surface design. The diamond finishing strips are available in 4 different thickness: **0.1 / 0.2 / 0.3** and **0.4 mm**. Three different grit sizes are available, according to the colour coding; **yellow** for superfine grit, **red** for fine grit and **blue** for medium grit. The stainless steel strips can be autoclaved and reused. Length: **147 mm** Wide: **6 mm**
